Objective

I seek challenging opportunities where I can fully use my skills for the success of the organization.

Education

- University of Calicut** 2027
B. Sc Computer Science
Pursuing
- GHSS Wadakkancherry** 2024
Bio Science
A
- Nirmala HS Kundukad** 2022
SSLC
100%

Projects

- Web Application for Store Management**
 - Developed an AI-assisted web application using prompt engineering for product management, inventory tracking, POS billing, sales management, reporting, and role-based access, with Google Sheets backend integration.
- Fake News Detection System**
 - Developed an NLP-based fake news classifier leveraging a pre-trained BERT model via the Hugging Face Inference API.
 - Built an interactive Gradio web interface for real-time text analysis, outputting Fake/Real predictions with confidence scores and robust error handling.
- Medical Insurance Cost Prediction**
 - Developed a Machine Learning regression model to predict individual medical insurance charges based on demographic and health factors such as age, BMI, smoking habits, and dependents.
 - Performed exploratory data analysis and data preprocessing, including encoding categorical features and splitting datasets for 80-20 train-test validation.
 - Evaluated model performance using metrics including Mean Absolute Error (MAE), Mean Squared Error (MSE), and achieved an R² score of 0.78.

Skills

- Technical Skills**
Python, C, Java, JavaScript, SQL, HTML, CSS, PostgreSQL, Machine Learning, Data Analysis, Generative AI, Git, GitHub, Google Colab.
- Soft Skills**
Problem Solving, Analytical Thinking, Communication, Teamwork, Adaptability

Internship

- IHRD Skill Center**
Completed an internship at IHRD Skill Center in Python, Data Science, and Artificial Intelligence, gaining hands-on experience in Python programming, data analysis, machine learning fundamentals, and AI concepts.
- Edunet Foundation**
Completed a 4-week virtual internship at Edunet Foundation in Artificial Intelligence and Machine Learning, gaining practical experience in AI concepts, machine learning algorithms, data preprocessing, model development, and real-world problem-solving using Python.
